EDUCATION

Master of Science, Computer Science

University of Utah

- **GPA:** 3.7 / 4.0
- **Coursework:** Deep Learning, Neuro-Symbolic Modeling, ML Security, Managing Data for ML, Graduate Algorithms

August 2024 - May 2026

Salt Lake City, UT, USA

Bachelor of Engineering, Computer Engineering

Savitribai Phule Pune University

- **GPA:** 8.7 / 10
- **Achievements:** Honors in Cybersecurity

July 2019 - May 2023

Pune, India

TECHNICAL SKILLS & EXPERTISE

- **AI / ML:** LLMs, RAG, agents, LangChain, vector embeddings, semantic caching, evals & observability, Hugging Face, OpenAI / Gemini / Claude APIs, Claude Code, OpenAI Codex
- **Programming Languages:** Python, TypeScript, JavaScript (ES6+), Java, C++, C
- **Backend:** REST APIs, Node.js, Spring Boot, Redis, MySQL, MongoDB, caching, concurrency, PostgreSQL
- **Cloud & Infrastructure:** AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD, Git
- **Frontend:** React, Next.js, Tailwind

PROFESSIONAL EXPERIENCE

AI Software Engineer Intern

AVI Human Services

- Built and deployed a real-time AI analytics platform (React, Node, TypeScript, Gemini API, Docker on AWS) that gave agency heads and staff faster visibility into student performance
- Designed a LangChain RAG pipeline with vector embeddings for automated curriculum generation, improving retrieved-content relevance by ~40%
- Built REST APIs with Redis caching and tuned MySQL indexes, holding median response times under 200ms under concurrent load
- Added automated alerting and graceful degradation across a 50,000+ student-record dataset to keep queries available during partial failures

May 2025 - August 2025

Logan, UT (Remote)

IT Systems & Security Intern

University of Utah

- Automated endpoint and security workflows in Python with enterprise tools (Intune, Tanium, BeyondTrust), improving compliance ~60% across a \$650M+ research environment
- Built device-provisioning pipelines for 70+ endpoints and resolved system, identity, and network issues across Windows / macOS, Active Directory, and Entra ID

June 2025 - May 2026

Salt Lake City, UT

Software Developer Intern

eWarranty Solutions

- Built a QR-code warranty verification system (Java, Kotlin, Spring Boot, REST APIs) serving 45,000+ products and cutting manual errors by 30%
- Modeled the analytics pipeline with async CompletableFuture chains and a read-optimized MySQL schema, tuning queries to cut API response times by 40%

July 2023 - February 2024

Pune, India

PROJECTS

SynapticaAI - LLM Inference Gateway [GitHub](#)

- Built an OpenAI-compatible LLM gateway that routes across providers with semantic caching, cutting redundant calls and token cost, with a live dashboard for latency, cost, and usage.
- Added continuous evals and request-level observability (traces, error rates, cache-hit rate) so prompt and model changes are measured before they ship.

Multi-Agent Data Wrangler [GitHub](#)

- Built a multi-agent data-cleaning pipeline where five specialized agents (parsing, validation, transformation, scoring, recovery) coordinate through a controller, so any step can fail and retry without breaking the others.
- Added a data-quality scorer rating tables on completeness, consistency, validity, and accuracy, validated on 200K rows across 42 columns, with a reversible design that lets any transformation be rolled back.

Autonomous Web Agent [GitHub](#)

- Built an autonomous web agent that drives multi-step browser workflows with Playwright and uses an Minimax M3 to interpret pages and decide actions, persisting state in SQLite.
- Runs 24/7 on a VPS with scheduled jobs (APScheduler) and retry and recovery logic, processing hundreds of tasks per day without supervision.

RESEARCH & RECOGNITION

- 2 IEEE publications and 3 filed patents (IP India) in generative models and computer vision. Smart India Hackathon 2022 Finalist. Links on portfolio.
